

Skill Coverage Checklist

Every skill in the curriculum, with a box per stage — tick as you verify each in the admin question preview

www.pedmas.com · 2026-08-21

Two machine layers already stand behind every row here. First, the automated suite generates and validates questions for every skill at every stage in both regions on every test run. Second, for grades 8–12, an independent computer-algebra engine (the CAS audit — see the Test Script, section H) re-derives answers from exactly the text a student sees; rows marked “CAS n/5” on the right have n of their five stages verified that way, so their computational correctness is triple-checked before you ever look.

This checklist is for the judgement no machine makes: does the question feel right for the grade, is the wording clear, would a child understand it? Open /admin, use the question preview for the skill and stage, and tick the box. The five boxes are stages 1–5; L means the skill's lesson has been read. Unmarked senior rows (no CAS tag) are the ones where your eyes are the only check on the mathematics itself — give those extra care.
